

Unit 2—Lesson 1:

Strings

Strings

```
let greeting = "Hello"  
var otherGreeting = "Salutations"
```

```
let joke = """  
    Q: Why did the chicken cross the road?  
    A: To get to the other side!  
    """  
  
print(joke)
```

```
Q: Why did the chicken cross the road?  
A: To get to the other side!
```

String basics

Escaping

```
let greeting = "It is traditional in programming to print ¥"Hello, world!¥""
```

Escape	Description
¥"	Double quote
¥¥	Backslash
¥t	Tab
¥r	Carriage return (return to beginning of the next line)

String basics

Empty strings

```
var myString = ""  
  
if myString.isEmpty {  
    print("The string is empty")  
}
```

String basics

Characters

```
let a = "a" // 'a' is a string  
let b: Character = "b" // 'b' is a Character
```

Concatenation

```
let string1 = "Hello"  
let string2 = ", world!"  
var myString = string1 + string2 // "Hello, world!"
```

```
myString += " Hello!" // "Hello, world! Hello!"
```

Interpolation

```
let name = "Rick"  
let age = 30  
print("¥(name) is ¥(age) years old")
```

Rick is 30 years old

Interpolation Expressions

```
let a = 4  
let b = 5  
print("If a is ¥(a) and b is ¥(b), then a + b equals ¥(a+b)")
```

If a is 4 and b is 5, then a + b equals 9

String equality and comparison

```
let month = "January"
let otherMonth = "January"
let lowercaseMonth = "january"

if month == otherMonth {
  print("They are the same")
}

if month != lowercaseMonth {
  print("They are not the same.")
}
```

They are the same.
They are not the same.

String equality and comparison

Ignoring case

```
let name = "Johnny Appleseed"  
if name.lowercased() == "johnny appleseed".lowercased() {  
    print("The two names are equal.")  
}
```

The two names are equal.

String equality and comparison

Prefix and suffix

```
let greeting = "Hello, world!"  
  
print(greeting.hasPrefix("Hello"))  
print(greeting.hasSuffix("world!"))  
print(greeting.hasSuffix("World!"))
```

true

true

false

String equality and comparison

Finding substrings

```
let greeting = "Hi Rick, my name is Amy."  
if greeting.contains("my name is") {  
    print("Making an introduction")  
}
```

Making an introduction

String equality and comparison

Checking length

```
let name = "Ryan Mears"  
let count = name.count  
print(count)  
let newPassword = "1234"  
  
if newPassword.count < 8 {  
    print("This password is too short. Passwords should have at least 8 characters.")  
}
```

10

This password is too short. Passwords should have at least 8 characters.

String equality and comparison

Using switch

```
let someCharacter: Character = "e"
switch someCharacter {
    case "a", "e", "i", "o", "u":
        print("¥(someCharacter) is a vowel.")
    default:
        print("¥(someCharacter) is not a vowel.")
}
```

e is a vowel.

Unicode

```
let cow = "🐮"  
let credentials = "résumé"  
let myBook = "私の本"  
print("∞".count)
```
